

LEKTRO MARKS MILESTONE WITH THEIR 5,000th ELECTRIC TUG

Los Angeles, California – LEKTRO, Inc. reached a milestone today delivering their 5,000th aircraft tug to American Airlines at Los Angeles International Airport (LAX). Now, LEKTRO has produced more towbarless aircraft tugs than any other manufacturer in the world.

The tug, a model AP8950SDB-AL-250, is the Oregon based company's largest pushback offering, capable of handling aircraft up to 280,000 pounds such as the Boeing 757. It is an upgraded version of LEKTRO's popular AP8950SDB-AL-200, which was introduced in 2014 and designed to handle aircraft up to 210,000 pounds like the Airbus A321 and Boeing 737.

"Our AP8950SDB-AL-250 is certified to handle virtually any narrow-body down thru Regional aircraft an airline may fly, it is by far, the most versatile towbarless tug available on the market today," noted LEKTRO President Eric Paulson.
